

**7.1.4 Water conservation facilities available in the Institution:**

1. Rain water harvesting
2. Bore well /Open well recharge
3. Construction of tanks and bunds
4. Waste water recycling
5. Maintenance of water bodies and distribution system in the campus

**Response:** As ShivajiMahavidyalaya, Renapur, Dist- Latur(MS) is located in rural area. The college depends on ground water for all its water needs. Hence, efficient usage of available water and adaptation of water conservation measures are essential. The daily requirement of water in the college campus is around 10000 liters.

**The following measures are taken for the conservation of water:**

1. **Rain water harvesting:**Rain water is completely utilized annually by water harvesting pits. Rain water is preserved which results into upgrading the water level and help for the proper growth of plant through bore wells.
2. **Bore well /Open well recharge:**An Bore well located in the campus is recharged by rain water.
3. **Construction of tanks and bunds:** There are 11 water storagetank located in College campus.A bunds of tank in the college having capacity 15000 litres .
4. **Waste water recycling:**Wastewater discharged from septic tank and Water filter wastewater are used for gardening, watering of trees etc.
5. **Maintenance of water bodies and distribution system in the campus:** In the college campus Borewellwater is pumped into storage tanks located at different places in the campus. There are 11numbers of water storagetank in the campus. The water is distributed through well pipe network. Drinking water after treating in RO plant is supplied through a separate set of pipelines and water for all other purpose is supplied through another set of distribution pipes. Entire distribution system is well supervised by Civil works committee to ensure that there are no leakages and wastages of precious water through joints, valves etc.
